RE: Select Medical 5th Floor Build-out at the Grass Medical Science Building Project

Dear Mr. Wolf:

I am writing to thank and commend James Craft & Son, Inc. for doing a great job on the Select Medical 5th Floor Build-out at the Grass Medical Science Building project. Your team, led by Dave Arndt and you, was responsible for the Plumbing and Mechanical scope of work which constituted over 40% of the cost of the entire project and did a fantastic job in delivering a quality product.

The project had a number of challenges associated with it due to it taking place as a part of a vertical expansion that was being done by another general contractor and over existing occupied hospital space. Not only did we have to work around the needs of the existing hospital, but we had to work alongside and within an entirely separate construction project that was being done by a different general contractor. Despite these challenges we did not encounter any complaints during the entirety of the project despite the fact that we spent over a month working at night within the occupied space below us in order to install the sanitary drains for our space.

Having worked on projects all over the country and in other circumstances similar to this, we could not have been more pleased with the professionalism and skill exhibited by yourself, Dave Arndt, and your entire team from top to bottom. It started from the beginning when James Craft & Son, Inc. lead the MEP overhead coordination 3D modeling and continued until well beyond when the project was completed and user generated system errors were generated and had to be corrected by us. Both, you and Dave, always answered the call and acted swiftly to provide corrective action even though the problems were not a result of errors on James Craft & Sons' part.

We look forward to working with you and your team on projects in the future and know that if we are fortunate enough to have the opportunity that we will be treated fairly and that a quality product will be delivered.

Thank you and congratulations on a job well done.

Sincerely,

Paul Garrick
Project Manager
